Protect Your Baby-right from the start! Vaccines give parents the safe, proven power to protect their children from 14 serious diseases before they turn 2 years old. Every dose of vaccine is important to protect against infectious diseases like the flu, measles and whooping cough (pertussis) that can be life threatening.

Back To School—protect your student at every age! Children age 4 to 6 are due for four boosters vaccines: DTaP (diphtheria, tetanus, pertussis), chickenpox, MMR (measles, mumps, rubella) and polio. Starting at 11 or 12—preteens and teens—need Tdap (tetanus, diphtheria, pertussis), MenACWY (meningococcal conjugate vaccine) and HPV (human papilloma virus) vaccines.

Off To the Future—means vaccines, too. Everyone age 6 months and older should have a flu vaccine every year. Every adult should get the Tdap vaccine once if they did not receive it as an adolescent, to protect against pertussis, tetanus, and diphtheria, and then a Td (tetanus, diphtheria) booster every 10 years. The HPV vaccine is recommended for boys and girls ages 11-12. Young women and men who have not started or finished the HPV vaccine series may be vaccinated through age 26. Meningococcal vaccine is recommended for young adults, especially first-year college students who will be living in residence halls.

Vaccines—are not just for kids. All adults should get an Influenza (flu) vaccine each year to protect against the seasonal flu. Every adult should get the Tdap vaccine once if they did not receive it as an adolescent to protect against pertussis, and then a Td booster every 10 years. Women are also recommended to get the Tdap vaccine each time they are pregnant, preferably at 27 through 36 weeks.

For more information visit: www.cdc.gov/vaccines/parents/index.html.

School physicals will be conducted 20-21 Aug 0800-1500 at the MDG Pediatrics Clinic. Call 676-6666 to schedule an appointment.

Children’s Eye Health & Safety Month

Your child’s eyes should be examined during regular pediatric appointments and vision testing should be conducted around age three.

Parents should be aware of signs that may indicate their child has vision problems, including:

- Wandering or crossed eyes, a family history of childhood vision problems, disinterest in reading or viewing distant objects, squinting or turning the head in an unusual manner while watching TV.
- More than 12 million children suffer from vision impairment, and eye injuries are one of the leading causes of vision loss in children. There are an estimated 42,000 sports-related eye injuries each year and the majority of them happen to children.

Children should: Wear protective eyewear while participating in sports or recreational activities. Play with age-appropriate toys. Avoid toys with sharp or protruding parts.

For more information visit: www.preventblindness.org & www.aao.org. Call 676-6666 to schedule an appointment with your provider.
